INTEREST OF AMICI CURIAE.....	1
INTRODUCTION AND SUMMARY OF ARGUMENT	2
ARGUMENT	5
I. Longstanding Precedent Governing Overflights Shows that the County's Zoning Does Not Constitute a Physical-Invasion Taking	6
A. Under <i>Causby</i> , Aircraft Cause a Physical-Invasion Taking Only Where Actual Overflights Are So Low and So Frequent that They Directly and Immediately Interfere with Land Use.....	6
B. The County's Implementation of the FAA's Safety Standards Cannot Possibly Satisfy the <i>Causby</i> Test	8
C. Courts Across the Country Have Uniformly Rejected the Landowners' "Reservation" Theory	11
D. The Landowners' Cases Are Easily Distinguished and Fail to Support Their Novel "Reservation" Theory.....	14
II. The County's Zoning Does Not Amount to a <i>Per Se</i> Taking under <i>Loretto</i> and Other Physical-Invasion Cases.....	17
III. The County's Zoning Does Not Effect a Regulatory Taking under <i>Lucas</i> or <i>Penn Central</i>	20
IV. A Ruling for the Landowners Would Have Devastating Consequences for Air Safety and Municipal Budgets Throughout Nevada and Across the Country	24
CONCLUSION.....	25

RESTATEMENT (SECOND) OF TORTS, § 159 18

RESTATEMENT (SECOND) OF TORTS, § 166 18

1 **INTEREST OF AMICI CURIAE**

2 The American Planning Association (APA) is a nonprofit public interest and
3 research organization, founded in 1978 exclusively for charitable, educational, literary,
4 and scientific research purposes to advance the art and science of planning -- physical,
5 economic and social -- at the local, regional, state, and national levels. APA's mission is
6 to encourage planning that will contribute to public well-being by developing communities
7 and environments that meet more effectively the needs of people and society. With 46
8 regional chapters, APA and its professional institute, the American Institute of Certified
9 Planners, represent more than 30,000 practicing planners, officials, and citizens across the
10 nation involved with urban and rural planning. Sixty-five percent of APA's members
11 work for state and local government agencies. The Nevada Chapter of APA was formed
12 in 1979 and currently has about 350 members. APA regularly files amicus briefs in
13 takings cases to ensure that takings jurisprudence continues to allow for reasonable land-
14 use planning in the public interest. A few of the cases in which APA has participated as
15 amicus curiae include: *Agins v. Tiburon*, 447 U.S. 255 (1980), *Williamson County Reg'l*
16 *Planning Comm'n v. Hamilton Bank*, 473 U.S. 172 (1985), *First English Evangelical*
17 *Lutheran Church v. County of Los Angeles*, 482 U.S. 304 (1987), *Yee v. City of Escondido*,
18 503 U.S. 519 (1992), *Lucas v. South Carolina Coastal Council*, 505 U.S. 1003 (1992),
19 *Dolan v. City of Tigard*, 512 U.S. 374 (1994), *Suitum v. Tahoe Reg'l Planning Agency*,
20 520 U.S. 725 (1997), *City of Monterey v. Del Monte Dunes at Monterey, Ltd.*, 526 U.S.
21 687 (1999), *Palazzolo v. Rhode Island*, 121 S. Ct. 2448 (2001), *Animas Valley Sand and*
22 *Gravel, Inc. v. Board of County Comm'rs of the County of La Plata*, 38 P.3d 59 (Colo.
23 2001), and *Tahoe-Sierra Preservation Council, Inc. v. Tahoe Reg'l Planning Agency*, No.
24 00-1167, *cert. granted*, 121 S. Ct. 2589 (2001) (oral argument heard Jan. 7, 2002).

25 The Tahoe Regional Planning Agency (TRPA) is a bi-state agency created by the
26 States of Nevada and California, with the consent of Congress, under the Compact Clause

1 of the U.S. Constitution. The Tahoe Regional Planning Compact, Pub. L. No. 96-551, 94
2 Stat. 3233, Nev. Rev. Stat. 277.200 (1980), requires TRPA to set environmental thresholds
3 and adopt a regional plan for protecting the unique beauty of the Lake Tahoe Basin, which
4 includes portions of Washoe, Carson City, and Douglas Counties. To achieve the
5 thresholds, TRPA regulates development in the Tahoe Basin, including limiting the height
6 of structures. *See, e.g.*, TRPA Code of Ordinances, Chapter 22 (Height Standards). Due
7 to its development controls, TRPA often litigates the appropriate boundaries of property
8 owners' rights under the Takings Clause. *See, e.g., Tahoe-Sierra Preservation Council,*
9 *Inc. v. TRPA, supra; Suitum v. TRPA, 520 U.S. 725 (1997); Kelly v. TRPA, 109 Nev. 638,*
10 *855 P.2d 1027 (1993).*

11 This case raises critical issues of national importance. The central question is
12 whether the Takings Clause requires local officials to compensate owners whose land is
13 subject to zoning that implements the minimum standards for air safety specified by the
14 Federal Aviation Administration (FAA). The challenged zoning is substantially similar to
15 the FAA's Model Zoning Ordinance used by airports across the country to secure federal
16 funding. There can be little doubt that the ramifications of this case extend far beyond the
17 County of Clark and the State of Nevada. Planners, municipalities, and owners of land
18 near airports across the country will carefully scrutinize this Court's ruling. Adoption of
19 the landowners' unprecedented takings theory would result in financially ruinous liability
20 for countless municipalities that seek nothing more than to meet the FAA's air safety
21 requirements. It also would severely chill planning for much-needed airport construction
22 and expansion.

23 INTRODUCTION AND SUMMARY OF ARGUMENT

24 The zoning ordinances challenged in this case impose height restrictions. *See*
25 Appellant's App., vol. 24, at 4843-56, 4858-74, Clark County Ordinance No. 728 and No.
26 1221, formerly codified at Chapter 29.50 of the Clark County Code, § 29.50.030 ("Airport

1 zone height limitations"). The zoning neither authorizes anyone to invade the airspace
2 over the landowners' property, nor "reserves" the airspace for use by the public. *Id.* By its
3 plain terms, the challenged zoning restricts the height of structures that pose a potential
4 hazard to aviation, and does nothing more. *Id.*

5 As a mere restriction on land use, the challenged zoning should be analyzed under
6 the standards for regulatory takings set forth in *Penn Central Transp. Co. v. New York*
7 *City*, 438 U.S. 104 (1978), and *Lucas v. South Carolina Coastal Council*, 505 U.S. 1003
8 (1992). Under *Penn Central*, courts consider (1) the economic impact of the regulation;
9 (2) whether it interferes with reasonable, investment-backed expectations; and (3) the
10 character of the government action. *Penn Central*, 438 U.S. at 124. Under *Lucas*, a land-
11 use restriction may effect a *per se* regulatory taking where it denies all economically
12 viable use of the claimant's entire parcel. *Lucas*, 505 U.S. at 1015-19. Just last Term, the
13 U.S. Supreme Court reaffirmed the applicability of *Penn Central* and *Lucas* to regulations
14 that limit the use of land like the challenged zoning ordinances. *See Palazzolo v. Rhode*
15 *Island*, 121 S. Ct. 2448, 2457 (2001). For many decades, there has been "no serious
16 difference of opinion in respect of the validity of laws and regulations fixing the height of
17 buildings within reasonable limits * * *." *Village of Euclid v. Ambler Realty Co.*, 272 U.S.
18 365, 388 (1926) (citing *Welch v. Swasey*, 214 U.S. 91 (1909)).

19 The district court, however, refused to evaluate the challenged height restrictions
20 under *Penn Central* and *Lucas*. Instead, the court ruled that the zoning constitutes a *per se*
21 physical-invasion taking under *Loretto v. Teleprompter Manhattan CATV Corp.*, 458 U.S.
22 419 (1982). *Loretto* holds that a *per se* taking occurs where the government authorizes a
23 permanent, physical occupation of property. *Id.* at 426-41. *Loretto's per se* rule is "very
24 narrow" (*id.* at 441) and is expressly tied to the unique injury that occurs where the
25 government requires a permanent occupation of land. *Id.* at 426 (where a government-
26 compelled invasion "reaches the extreme form of a permanent physical occupation, * * *

1 the 'character of the government action' not only is an important factor in resolving
2 whether the action works a taking but also is determinative."); *accord, Yee v. City of*
3 *Escondido*, 503 U.S. 519, 527 (1992) ("The government effects a physical taking only
4 where it *requires* the landowner to submit to the physical occupation of his land.").
5 Because the challenged zoning does not require or authorize any occupation of the
6 landowners' property, the district court plainly erred in applying *Loretto's per se* rule.

7 But the district court's errors did not stop there. It failed to recognize that even
8 where physical invasions occurs from government-authorized aircraft overflights, *Loretto*
9 still has no application. Rather, allegations of takings by overflights are governed by
10 *United States v. Causby*, 328 U.S. 256 (1946). In language that could not be clearer, the
11 *Causby* Court held:

12 Flights over private land are not a taking, unless they are so
13 low and so frequent as to be a direct and immediate
interference with the enjoyment and use of the land.

14 *Id.* at 266. Notwithstanding this exacting standard, the district court found a "Causby-
15 type" physical-invasion *per se* taking (*see* Appellant's App., vol. 27, at 5565-66, slip op. at
16 11-12), even though there is no evidence that the airspace at issue ever will be used by a
17 single plane.

18 To our knowledge, never before has a court found a physical-invasion taking by
19 overflights where the record falls so short of the requisite showing under *Causby*. The
20 ruling below conflicts not only with *Causby*, but also with rulings from the highest courts
21 of states across the country. By applying *Causby* so casually, and by ignoring the
22 standards that apply to restrictions on land use, the district court improperly blurred the
23 longstanding distinction between physical-invasion takings and regulatory takings, a
24 distinction reaffirmed just last year by the U.S. Supreme Court. *See Palazzolo*, 121 S. Ct.
25 at 2457.

1 At bottom, this is a straightforward case. The landowners argue that the challenged
2 zoning works a *per se* physical-invasion taking due to the mere possibility of an
3 inadvertent overflight that might someday invade the airspace over their property. But
4 their novel physical-invasion theory flies headlong into *Causby* and decades of other
5 precedent. The County's height restrictions do not authorize a single invasion of the
6 airspace, much less result in overflights "so low and so frequent" that they directly and
7 immediately interfere with the use of the land.

8 The challenged height restrictions are typical of those used by airports across the
9 country. As explained below, federal law requires these protections as a condition of
10 federal funding for airport development projects. The height restrictions help to prevent
11 catastrophic collisions in the event of an unplanned deviation from normal flight paths,
12 thereby protecting both the flying public and people on the ground from death or injury. If
13 the County's zoning is deemed to be a compensable taking, airport authorities and planners
14 across the state of Nevada and throughout the country would be handcuffed by the threat
15 of huge compensation awards and unable to protect the public from devastating tragedies.
16 The end result would be massive liability for existing airport authorities that adhere to the
17 FAA's minimum safety standards, as well as a sharp curtailment of airport construction
18 and expansion, yet another devastating blow to the airline industry and the traveling
19 public.

20 ARGUMENT

21 Section I of this brief shows that, even assuming *arguendo* that the challenged
22 zoning somehow "authorizes" overflights, the landowners failed altogether to establish
23 that any invasion of their airspace would meet the stringent *Causby* standard that applies to
24 takings by overflight. Section II demonstrates that the *per se* rule of liability for
25 permanent physical occupations articulated in *Loretto* and other non-overflight cases does
26 not apply here. Section III explains why the landowners' takings claim fails under the

1 *Lucas* and *Penn Central* tests that apply to height restrictions like the challenged zoning.
2 Finally, Section IV highlights the dramatic, national implications of this case.

3 **I. Longstanding Precedent Governing Overflights Shows that the County's**
4 **Zoning Does Not Constitute a Physical-Invasion Taking.**

5 **A. Under *Causby*, Aircraft Cause a Physical-Invasion Taking Only**
6 **Where Actual Overflights Are So Low and So Frequent that They**
7 **Directly and Immediately Interfere with Land Use.**

8 Because the landowners and the district court take such liberties with it, we begin
9 by once again quoting the U.S. Supreme Court test that governs allegations of a physical-
10 invasion taking by aircraft overflights:

11 Flights over private land are not a taking, unless they are so
12 low and so frequent as to be a direct and immediate
13 interference with the enjoyment and use of the land.

14 *Causby*, 328 U.S. at 266. *Causby* "remains unbowed today as the leading pronouncement
15 in the field" of overflight takings. R. Meltz, et al., THE TAKINGS ISSUE: CONSTITUTIONAL
16 LIMITS ON LAND USE CONTROL AND ENVIRONMENTAL REGULATION 338 (1999).

17 Although the district court purported to find a "*Causby* type" taking (*see* Appellant's App.,
18 vol. 27, at 5565-66, slip op. at 11-12), it nowhere acknowledged the *Causby* "so low and
19 so frequent" standard.

20 On the facts before it, the *Causby* Court had little difficulty in finding a taking. The
21 military overflights at issue were so low and frequent that the landowners were forced to
22 abandon the existing use of the land as a commercial chicken farm. *Causby*, 328 U.S. at
23 259. Four-motored bombers, fighters, and transports "frequently passed over [the] land
24 and buildings in considerable numbers and rather close together." *Id.* They blew the
25 leaves off the trees, the noise was "startling," and at night the glare brightly lit up the sky.
26 *Id.* About 150 chickens were killed by flying into the walls of the barn from fright. *Id.*
"The result was the destruction of the use of the property as a commercial chicken farm."
Id.

1 *Causby's* exacting standard reflects a balance between the needs of modern aviation
2 and the plight of property owners who suffer frequent, disruptively low overflights. The
3 *Causby* Court observed that although common law ownership of land "extended to the
4 periphery of the universe * * *, that doctrine has no place in the modern world." *Id.* at
5 260-61. The Court emphasized that air travel "is part of the modern environment of life,
6 and the inconveniences which it causes are normally not compensable under the Fifth
7 Amendment." *Id.* at 266. The Court recognized, however, that "[i]f, by reason of the
8 frequency and altitude of the flights, [the owners] could not use this land for any purpose,
9 their loss would be complete," and a compensable taking would occur. *Id.* at 261. To
10 address the special concerns raised by air travel, the *Causby* test contains a unique blend of
11 trespass, nuisance, and takings law. *See* Meltz, *supra*, at 338.

12 In *Griggs v. County of Allegheny*, 369 U.S. 84 (1962), the U.S. Supreme Court
13 again applied the *Causby* test to find a taking where "regular and almost continuous daily
14 flights, often several minutes apart" flew so low over the claimant's home that the noise
15 was "unbearable," comparable to the noise from a riveting machine or steam hammer,
16 making it impossible to converse or sleep, rattling windows, causing plaster to fall from
17 the walls and ceilings, and impairing the health of those in the house. *Id.* at 86-87. Under
18 the *Causby* standard, it was clear that the airport glide paths resulted in actual overflights
19 so low and so frequent as to directly and immediately interfere with the use of the
20 claimant's home.

21 The *Causby* standard -- "so low and so frequent as to be a direct and immediate
22 interference with the enjoyment and use of the land" -- is a demanding test. In the words
23 of one prominent takings treatise, "almost all successful overflight/takings cases involve *
24 * * planes flying over *regularly* at less than 1,000 (usually less than 500) feet." Meltz,
25 *supra*, at 342 (emphasis added). Moreover, "the stringent *Causby* 'direct and immediate
26 interference' standard must always be satisfied." *Id.* As stated by the U.S. Court of

1 Federal Claims -- the court with jurisdiction over most takings claims against the United
2 States -- a claimant alleging a physical-invasion taking by aircraft must show "that those
3 flights were of such frequency that they substantially interfered with the use and
4 enjoyment of the underlying land." *Persyn v. United States*, 34 Fed. Cl. 187, 196 (1995).

5 **B. The County's Implementation of the FAA's Safety Standards**
6 **Cannot Possibly Satisfy the *Causby* Test.**

7 In both *Causby* and *Griggs*, the Court found a taking due to actual overflights that
8 severely interfered with the existing surface use of the land: the chicken farm in *Causby*
9 and the home in *Griggs*. In contrast, the landowners in the case at bar do not argue that
10 the challenged height restrictions interfere in any way with the existing surface use of their
11 land. Their claim is based entirely on a speculative, future use of the volume of air above
12 their land based on the alleged proposed construction of a forty-story casino, a use that is
13 inconsistent with the pre-existing, generally applicable zoning that applies to the land. For
14 this reason alone, no taking has occurred under *Causby*.

15 To fully understand the practical significance of the landowners' physical-invasion
16 theory, as well as the inapplicability of *Causby* to the challenged zoning, it is helpful to
17 explain the relationship between the County's zoning and the FAA's Obstruction
18 Standards.

19 The property at issue is not under an approach zone used for take-offs and landings.
20 Rather, it falls in the "transition zone" defined by the transitional surface described in Part
21 77 of the FAA rules. *See* 14 C.F.R. § 77.25(e). The transition zone is adjacent to, and
22 outside of, the actual approach zone. *Id.* These transition zones provide a buffer to the
23 actual approach zone by extending outward and upward at a slope of 7 to 1 from the sides
24 of the approach zone for 5000 feet. *Id.* The height limitations on structures within
25 transition zones provide an extra margin of safety in the highly unlikely event that an
26

1 engine failure or other unplanned circumstance causes a deviation from the normal
2 flightpath.

3 The FAA rules require that it be notified when anyone proposes to build or alter
4 specified structures near an airport. *Id.* at § 77.13. The regulations specify several
5 categories of structures as "obstructions," including any structure that penetrates the
6 transitional surface or any other surface defined in § 77.25. *Id.* at § 77.23(a)(5). The FAA
7 then conducts aeronautical studies to determine whether any structure deemed to be an
8 obstruction constitutes an actual hazard to aviation. *Id.* at §§ 77.31-.39. A determination
9 that an obstruction constitutes an air hazard, however, has no enforceable legal effect. *See*
10 *Aircraft Owners and Pilots Ass'n v. FAA*, 600 F.2d 965, 967 (D.C. Cir. 1979) ("The FAA
11 is not empowered to prohibit or limit proposed construction it deems dangerous to air
12 navigation."). Instead, the Congress has left the enforcement of these protections to state
13 and local governments. *See, e.g., Commonwealth v. Rogers*, 634 A.2d 245, 250 (Pa. Super.
14 Ct. 1993).

15 State and local enforcement of the FAA's safety standards and hazard
16 determinations often is a foregone conclusion because federal law requires such
17 enforcement to qualify for federal funding for airport development projects. *See* 49 U.S.C.
18 § 47107(a)(9) (requiring "appropriate action * * * mitigating existing, and preventing
19 future, airport hazards" as a condition of federal funding). In the same vein, federal law
20 also requires municipalities that receive federal funding to adopt appropriate, reasonable
21 zoning laws "to restrict the use of land next to or near the airport to uses that are
22 compatible with normal airport operations * * *." *Id.* at § 47107(a)(10).¹

23
24
25 ¹ These requirements were originally set forth in the Airport and Airway Improvement Act
26 of 1982, P.L. 97-248, as amended. In 1994, this law was repealed and its provisions
codified without substantive change at Title 49, U.S.C. *See* Codification of Certain U.S.
Transportation Laws at 49 U.S.C., Pub. L. No. 103-272, 108 Stat. 745 (1994).

1 To help municipalities comply with these requirements, the FAA has prepared a
2 model zoning ordinance that contains height restrictions that implement the Part 77
3 standards. See FAA Advisory Circular 150/5190-4A (1987) ("A Model Ordinance to
4 Limit Height of Objects Around Airports") (available at www.faa.gov/arp/pdf/5190-4a.pdf). The Model Ordinance explains that because the FAA itself cannot regulate air
5 hazards, "[t]he enactment of this proposed model zoning ordinance will permit the local
6 authorities to control the erection of hazards to air navigation and thus protect the
7 community's investment in the airport." *Id.* at Par. 5(h)(i). The Model Ordinance includes
8 height restrictions that implement all of the Part 77 Standards, including those for
9 transition zones. *Id.* at Appendix 1, Section IV, Par. 8 ("Transitional Zones"). The zoning
10 ordinances challenged in this case are substantially similar to the FAA's Model Zoning
11 Ordinance. Compare *id.* with Clark County Ordinance 1221, formerly codified at §
12 29.50.030 (B) (Airport zone height limitations, Transition Zones, Appellant's App., vol.
13 24, at 4858-74).

15 The foregoing provides two independent reasons why the challenged zoning does
16 not effect a taking under *Causby*. First, the zoning imposes only height restrictions, and
17 does not authorize any invasion of the airspace over the land at issue. Second, any
18 unplanned or emergency invasion of the transition zone cannot possibly meet the *Causby*
19 so-low-and-so-frequent standard so as to constitute a compensable taking. Indeed, such
20 invasions might never occur at all. In the instant case, amici are informed that there is no
21 evidence that any plane ever will actually invade the airspace over the landowners' land.
22 Even if invasions of transition zones were a certainty, they do not occur with sufficient
23 frequency to work a taking under *Causby*.

24 If the landowners' radical physical-invasion theory were adopted, it plausibly could
25 be applied not only to all transition-zone property, but also property subject to *any* of the
26 FAA Part 77 Obstruction Standards. Height restrictions in so-called horizontal and

1 conical zones, for example, extend for miles around an airport. 14 C.F.R. § 77.25 (a) &
2 (b). Like the transition zones, the height restrictions for the horizontal and conical zones
3 help to avoid catastrophic collisions in the event of an unplanned deviation from the
4 flightpath. On the landowners' theory, any height restriction over property that might
5 someday be invaded by an inadvertent overflight constitutes a taking, regardless of how
6 infrequent the overflight. No court has ever adopted this radical theory, and nothing in
7 *Causby* warrants this dramatic expansion of takings liability.

8 **C. Courts Across the Country Have Uniformly Rejected the**
9 **Landowners' "Reservation" Theory.**

10 The landowners try to shoehorn the County's height restrictions into a physical-
11 invasion theory by relying on deposition testimony of William Dunlay. *See* Appellant's
12 App., vol. 23, at 4734-35. Mr. Dunlay acknowledged that a portion of the airspace over
13 the landowners' property is part of the transition zone, and he observed that a plane might
14 someday need to deviate from its normal flight path and use the airspace over this land.
15 *See id.* at 4805-07. But Mr. Dunlay explained that it is unclear how frequently, if ever, a
16 plane might need to invade that space:

17 "Q. And [overflights in transition zones] may happen twice in a month or
18 it may never happen in a year; is that correct? You just don't know?

19 A. Don't know, uh-huh.

20 Q. And is there any way, in your mind, of knowing when that actual
21 transition zone surface is used by an airplane?

22 A. Not really, no.

23 *Id.*

24 Despite the landowners' heavy reliance on this testimony, it is thoroughly
25 unremarkable, for it adds nothing to what is already known about the purpose and effect of
26 transition zones. It simply recognizes the reality that transition zones provide an extra

1 margin of safety in case of an unplanned deviation from the normal flightpath, deviations
2 that rarely occur. Nevertheless, the landowners argue that any height restriction imposed
3 to help avoid air collisions in transition zones "reserves" and thus takes the airspace, no
4 matter how infrequent the invasion, and no matter how low the risk of actual overflight.

5 Federal and state courts across the country uniformly have rejected the landowners'
6 radical theory. For example, in *Village of Willoughby Hills v. Corrigan*, 278 N.E.2d 658
7 (Ohio 1972), the Supreme Court of Ohio rejected an identical takings challenge brought by
8 owners of land in a transition zone subject to a 70-foot height restriction. An intermediate
9 appeals court had held that the ordinance imposing the transition zone height restriction, in
10 effect, "provides what amounts to an air easement for approaching and leaving aircraft * *
11 *." *Id.* at 662 n.7. The Ohio Supreme Court reversed, ruling that the challenge failed
12 because "there was no claim of frequent low flights over plaintiff's land as was involved in
13 [*Causby* and *Griggs*]." *Id.* at 663.

14 In *Fitzgarrald v. City of Iowa City*, 492 N.W.2d 659 (Iowa 1992), the Supreme
15 Court of Iowa rejected a takings challenge to land-use and height restrictions on property
16 used for a mobile home park within an approach zone of the Iowa City Municipal Airport.
17 As in the instant case, the ordinance in *Fitzgarrald* largely mirrored the restrictions
18 contained in the FAA's Part 77 obstruction standards. Ruling that "an aviation easement
19 may be required when flights are so low and so frequent as to amount to a taking of
20 property," *id.* at 663, the court rejected the landowners' physical-invasion claim because
21 the record was "devoid of any evidence showing either the frequency or approximate
22 altitudes of planes flying over plaintiffs' lands" and failed to show that any actual
23 overflight reduced the land's value. *Id.* at 664-65.

24 In *Harris v. City of Wichita*, 862 F. Supp. 287 (D. Kan. 1994), landowners alleged
25 that land-use restrictions on property within certain airport overlay districts (AODs) for
26 McConnell Air Force Base effected a taking. *Id.* at 289-90. Although aircraft flew

1 directly over the claimants' land, the claimants did not challenge those overflights, only the
2 use restrictions. *Id.* at 289. As in the case at bar, the restrictions in *Harris* allowed the
3 claimants to continue the existing use of their land, but they prohibited the claimants from
4 pursuing their plans for commercial uses. *Id.* at 290. And like the landowners here, the
5 claimants in *Harris* argued that the land-use restrictions constituted a physical invasion of
6 their land under *Loretto* by creating an easement. *Id.* at 291. The *Harris* court
7 emphatically rejected this physical-invasion theory:

8 Plaintiffs argue that the AOD restrictions actually create an easement
9 over their property for military aircraft to use and an easement on
10 their land for safer airplane crashes. The court disagrees. Although
11 military and other aircraft fly over plaintiffs' property in approach and
12 take-off, it is not the AOD regulations that permit this. Furthermore,
13 the AOD restrictions do not permit airplane crashes on plaintiffs'
14 property. Rather, they restrict land uses so that in the event of such a
15 crash, the impact is felt by as few people as possible.

16 *Id.* at 291. Myriad other rulings are in accord.²

17 The landowners would have this Court ignore the *Causby* standard -- "so low and
18 so frequent as to be a direct and immediate interference" -- and hold that a height
19 restriction combined with the mere risk of an overflight, however remote, constitutes an

20 ² *E.g., Garamella v. City of Bridgeport*, 63 F. Supp. 2d 198, 202 (D. Conn. 1999)
21 (physical-invasion taking from overflights occurs "[w]here the frequency and altitude of
22 the flights prevent the property owner from using the land for any purpose"); *Persyn*, 34
23 Fed. Cl. at 207 (no taking where the claimants failed to "establish that aircraft flew directly
24 over the subject parcels, or the altitude or number of such aircraft, and interference with
25 the use and enjoyment of those parcels"); *Powell v. United States*, 1 Cl. Ct. 669, 674
26 (1983) (no taking because military aircraft overflights were not "sufficiently frequent or
sufficiently noisy to cause substantial interference with the use and enjoyment" of the
land); *Moore v. United States*, 185 F. Supp. 399, 400 (N.D. Tex. 1960) (no taking absent
evidence of "physical invasion of plaintiffs' property by a sufficient number of aircraft as
to interfere with the use and enjoyment thereof"); *Richmond, Fredericksburg, & Potomac
R.R. Co. v. Metropolitan Wash. Airports Auth.*, 468 S.E.2d 90, 97 (Va. 1996) (no taking,
notwithstanding 23,000 annual overflights, due to lack of evidence on "the types of aircraft
using the runway, the height at which they passed over the property, or the frequency of
landings"); *Harrell's Candy Kitchen, Inc. v. Sarasota-Manatee Airport Authority*, 111 So.
2d 439 (Fla. 1959) (height restrictions in airport zoning did not effect a taking); *Claassen
v. City and County of Denver*, 30 P.3d 710, 712-13 (Colo. Ct. App. 2001) (absent an actual
physical invasion into the airspace above the claimant's property but below the navigable
airspace, there is no physical taking).

1 automatic taking. Even if it were certain that a plane would invade a transition zone on
2 occasion, the invasions would come nowhere near meeting the *Causby* standard for
3 takings by overflights. This Court should decline the landowners' radical invitation.

4 **D. The Landowners' Cases Are Easily Distinguished and Fail to**
5 **Support Their Novel "Reservation" Theory.**

6 In their submissions to date, the landowners have failed to cite a single case holding
7 that a physical-invasion taking occurred based on the mere risk of an inadvertent
8 overflight. For instance, in *Sneed v. County of Riverside*, 32 Cal. Rptr. 318 (Dist. Ct. App.
9 1963) -- the overflight case that receives the most attention in the landowners' summary
10 judgment motion -- the plaintiff alleged that "large numbers of aircraft take off and land,
11 [and] fly at low altitudes over plaintiff's property pursuant to instructions from the
12 employees of defendant County." *Id.* at 320. The court found a taking but expressly
13 distinguished the airport ordinance before it from traditional height restrictions that
14 involve no invasion or trespass. *Id.* Nothing in *Sneed* suggests that a physical-invasion
15 taking occurs based on the mere risk on an occasional, inadvertent invasion of airspace.

16 Like *Sneed*, most of the other cases cited by the landowners involve property
17 directly in the approach zone or glide path and thus address actual physical intrusions of
18 airspace by continuous overflights.³ Another case cited by the landowners resulted in total

19 ³ *E.g.*, *Town of East Haven v. Eastern Airlines*, 331 F. Supp. 16 (D. Conn. 1971) (finding a
20 taking where planes passed over land several times a day at low altitudes; no taking where
21 land was subject to only occasional overflights); *McShane v. City of Faribault*, 292
22 N.W.2d 253, 255 (Minn. 1980) (finding a taking based on zoning of "land lying just
23 beyond airport runways" to be used for approaches); *Indiana Toll Road Comm'n v.*
24 *Jankovich*, 193 N.E.2d 237, 238 (Ind. 1963) (finding a taking of a road in the "inner area
25 approach zone" of a runway.); *Roark v. City of Caldwell*, 394 P.2d 641, 642 (Idaho 1964)
26 (finding a taking based on zoning for take-off and landing approaches that limited portions
of the claimant's land to agriculture uses); *Jackson Mun. Airport Auth. v. Evans*, 191 So.
2d 126, 128-29 (Miss. 1966) (finding a taking where city ordered a landowner to remove
trees that "constitute[d] a serious obstruction to aircraft landing and taking off" within the
approach zone); *Hageman v. Board of Trustees of Wayne Township*, 251 N.E.2d 507, 512
(Ohio Ct. App. 1969) (invalidating airport zoning for a corridor used in take-offs and
landings); *Ackerman v. Seattle*, 348 P.2d 664, 668 (Wash. 1960) (finding a taking based on
"continuing and frequent low flights over the appellants land").

1 loss of value,⁴ and thus is easily distinguished from the case at bar where the landowners
2 may continue to make economically viable use of their land. In two other cases cited by
3 the landowners, the height restrictions at issue did not cause a taking, but the ordinances
4 were struck down for procedural or substantive due process violations irrelevant to the
5 instant case.⁵ Other cases relied on by the landowners involve condemnation proceedings
6 to determine the value of an avigation easement for actual, regular overflights of land
7 under approach zones.⁶ None of these cases suggests that a court may find a physical-
8 invasion taking based on the mere possibility that an occasional, inadvertent overflight
9 might occur.

10 Because they can draw no support from overflight cases, the landowners argue by
11 analogy, suggesting that the county's height restrictions be viewed as similar to a runaway

12 _____
13 ⁴ See *Yara Eng'g Corp. v. City of Newark*, 40 A.2d 559 (N.J. 1945) (finding a taking
14 where an airport ordinance restricted all development of salt marsh and left it with only
nominal value.).

15 ⁵ *Peacock v. County of Sacramento*, 77 Cal. Rptr. 391, 403 (Ct. App. 1969) (height
16 restriction was "reasonable up to a point in time," but effected a taking in conjunction with
17 "cumulative effect with the other county enactments" and an 11-year planning process
18 which acted to "freeze development of any meaningful kind."); *Kissinger v. City of Los
19 Angeles*, 327 P.2d 10, 15-16 (Cal. Ct. App. 1958) (spot downzoning was struck down as
"arbitrary, discriminatory * * * and without due process of law" because it was enacted as
an emergency ordinance without public hearings, property was treated differently than
other property within the flight path, and the "inference [was] clear that the true
purpose... was to prevent the improvement of the subject property in order that it might be
acquired at a lesser price for airport purposes.").

20 ⁶ *United States v. 48.10 Acres of Land*, 144 F. Supp. 258 (S.D.N.Y. 1956) (condemnation
21 of easements for glide path needed for landings and take-offs); *United States v. 4.43 Acres
22 of Land*, 137 F. Supp. 567 (N.D. Tex. 1956) (same); *Minkowitz v. City of West Memphis*,
23 406 S.W.2d 887, 888 (Ark. 1966) (condemnation proceeding for a "clear zone approach or
24 avigation easement" on land "directly north" of the runway); *Dolezal v. City of Cedar
25 Rapids*, 209 N.W.2d 84, 87 (Iowa 1973) (condemnation of a "clear zone approach" for the
26 glide zone and the right to install and maintain obstruction lights); *Bowling Green-Warren
Co. Airport Bd. v. Long*, 364 S.W.2d 167, 171 (Ky. Ct. App. 1963) (condemnation for
airport approach zones, including the "right to a certain use of the air space"); *Kupster
Realty Corp. v. State of New York*, 404 N.Y.S.2d 225 (N.Y. Ct. Cl. 1978) (condemnation
proceeding in which landowners claim consequential damages from the noise caused by
overflights within the condemned easements).

1 truck ramp or a permanent government reservation of a table at a private restaurant. These
2 analogies fail, however, because unlike those situations, the County has not invaded
3 private property to build a structure (as in the truck ramp hypothetical) nor authorized the
4 invasion of property (as in the restaurant analogy).

5 A more apt analogy would be a setback requirement on lots adjacent to a busy,
6 government-built street imposed to reduce fatalities in case a car accidentally swerves off
7 the road. It is indisputable that reasonable setback requirements are not takings. *See, e.g.,*
8 *Keystone Bituminous Coal Ass'n v. DeBenedictis*, 480 U.S. 470, 498 (1987) (reasonable
9 setback requirements are not compensable) (citing *Gorieb v. Fox*, 274 U.S. 603 (1927)
10 (upholding setback requirement)). Setback requirements that enhance traffic safety do not
11 "reserve" or otherwise take private property, but simply provide a margin of safety in case
12 a vehicle is forced to veer off from the normal flow of traffic onto the land. In the same
13 way, the County's height restrictions do not reserve or otherwise take the landowners'
14 airspace for public use, but instead simply reduce air hazards in case a plane is forced to
15 deviate from the normal flight path.

16 The landowners' physical-invasion theory is particularly disturbing in light of the
17 tragic events of September 11. Suppose New York City were to impose a height
18 restriction that prohibits new skyscrapers on the World Trade Center site due to the risk of
19 another terrorist attack, but allowed other economically viable uses of the land. No
20 reasonable person would view this as a municipal "reservation" of air rights. But on the
21 landowners' theory, if the purpose of a height restriction is to remove obstacles from
22 potential flight paths, the restriction is a compensable taking regardless of how frequently
23 an actual invasion occurs (if at all), and regardless of whether the restriction denies
24 economically viable use of the land. Nothing in takings jurisprudence warrants this absurd
25 result.

26

1 **II. The County's Zoning Does Not Amount to a *Per Se* Taking under *Loretto* and**
2 **Other Physical-Invasion Cases.**

3 As described above, a well-developed and nuanced body of overflight takings law
4 rules out the possibility of a taking on the undisputed facts of this case. Not surprisingly,
5 the landowners avoid extensive discussion of the *Causby* standard and argue instead that
6 the mere risk of rare overflights should be viewed as a permanent, physical occupation of
7 land and thus a *per se* taking under *Loretto*.

8 Their reliance on *Loretto* is misplaced for two reasons. First, nothing in the
9 County's zoning authorizes a physical invasion of their land. Absent such government
10 compulsion, no *Loretto* taking occurs. *See Loretto*, 458 U.S. at 440 (distinguishing cases
11 in which the government does not require a physical occupation); *accord, Yee*, 503 U.S. at
12 527 (rejecting a *Loretto* challenge to rent control absent evidence of a compelled
13 permanent occupation: "The government effects a physical taking only where it *requires*
14 the landowner to submit to the physical occupation of his land."); *Federal*
15 *Communications Comm'n v. Florida Power Corp.*, 480 U.S. 245, 252 (1987) (rejecting a
16 *Loretto* challenge to federal controls on fees paid by cable television operators for use of
17 utility poles absent evidence of a compelled permanent occupation: "This element of
18 required acquiescence is at the heart of the concept of occupation [under *Loretto's per se*
19 rule]).

20 Second, and more fundamentally, the landowners' argument misses the entire point
21 of *Causby* and *Griggs* on the one hand, and *Loretto* on the other: there is a fundamental
22 difference between overflights and actual trespass on land by permanent physical
23 occupations.
24
25
26

1 This distinction derives from the very roots of physical-invasion takings cases in
2 the common law of trespass.⁷ The law of trespass on land is absolute: any intentional
3 trespass on land is actionable, regardless of the extent of the invasion or the quantum of
4 damages. See RESTATEMENT (SECOND) OF TORTS, § 166. The law of trespass of airspace
5 is far more forgiving, holding a private individual liable for trespass of airspace only when
6 a flight (1) enters into the immediate reaches of the airspace next to the land; and (2)
7 interferes substantially with the owner's use and enjoyment of the land. See *id.* at § 159.

8 This is the precise distinction drawn in *Causby* and *Griggs*, and it is a distinction
9 drawn from practical necessity. In the words of *Causby*, "[c]ommon sense revolts at the
10 idea" that every invasion of airspace constitutes a taking. 328 U.S. at 260. "To recognize
11 such private claims" the Court held, "would clog these highways, seriously interfere with
12 their control and development in the public interest." *Id.* at 261.⁸ Thus, the Court held
13 "[f]lights over private land are not a taking, unless they are so low and so frequent as to be
14 a direct and immediate interference with the enjoyment and use of the land." *Id.* at 266;
15 accord, *Brown v. United States*, 73 F.3d 1100,1104 (Fed. Cir. 1996) ("unlike a
16 government invasion of the surface land itself, an invasion of airspace above surface land
17 does not *per se* constitute a taking.")

18 While the Court in *Causby* and subsequent cases has described overflights as "in
19 the same category as invasions of the surface," 328 U.S. at 265, this does not mean that
20 any invasion of airspace is a *per se* taking. To the contrary, *Loretto* makes absolutely clear
21 that most invasions and occupations are not subject to its *per se* rule. 458 U.S. at 435 n.12
22 ("not every physical invasion is a taking."). Under *Loretto*, there is "a distinction between

23 ⁷ For example, the first sentence of the U.S. Supreme Court's first physical-invasion
24 takings case, *Pumpelly v. Green Bay*, 80 U.S. (13 Wall.) 166 (1872), states: "This is an
action of trespass on the case * * *."

25 ⁸ Cf. *Richards v. Washington Terminal Co.*, 233 U.S. 546, 555 (1914) (rejecting absolute
26 takings liability for the invasions of soot and smoke by railroads because of fear that such
suits "bring the operation of railroads to a standstill.").

1 a permanent physical occupation, a physical invasion short of an occupation, and a
2 regulation that merely restricts the use of property." *Id.* at 430.

3 Physical invasions short of permanent physical occupations are "subject to a more
4 complex balancing process to determine whether they are a taking." *Id.* at 435 n.12.⁹
5 Examples abound. In flood cases such as *Sanguinetti v. United States*, 264 U.S. 146
6 (1924), the Court ruled that "to create an enforceable liability against the government it is
7 at least necessary that the overflow be the direct result of the structure, and constitute an
8 actual, permanent invasion of the land amounting to an appropriation of and not merely an
9 injury to the property." *Id.* at 149. In cases involving invasions of soot and smoke from
10 railroads, the rule from *Richards v. Washington Terminal Co.*, 233 U.S. 546 (1914), is that
11 such invasions are not takings unless the invasion is "direct and peculiar and substantial."
12 *Id.* at 557.

13 The universal conclusion of courts addressing airplane overflights is that invasions
14 of airspace constitute takings only where they are both low and frequent. No court to our
15 knowledge (except the district court in this case) has extended the *Loretto per se* rule to
16 cover potential, sporadic overflights. This court should decline the landowners' invitation
17 to be the first high court in the country to adopt such an extreme and unworkable rule.¹⁰

18 ⁹ See also *Loretto*, 458 U.S. at 433 ("in cases of physical invasion short of permanent
19 appropriation, the fact that the government itself commits an invasion from which it
20 directly benefits is one relevant factor in determining whether a taking has occurred."
(citing *Penn Central*)); *United States v. Cress*, 243 U.S. 316, 328 (1917) ("it is the
character of the invasion * * * that determines the question whether there is a taking.").

21 ¹⁰ *Nollan v. California Coastal Comm'n*, 483 U.S. 825 (1987), provides no support for the
22 landowners' argument that *Loretto's per se* rule applies to this case. *Nollan* involved a
23 straightforward application of *Loretto*, holding that where the government requires a
24 landowner to permit beachfront property to be continuously traversed by strangers, there is
25 a permanent physical occupation "even though no particular individual is permitted to
26 station himself permanently upon the premises." 483 U.S. at 832. *Nollan* is clearly
distinguishable from the case at bar. First, *Nollan* involved actual invasions onto the land,
an evisceration of the right to exclude that is qualitatively more complete than potential
invasions of airspace above reasonable height restrictions. Second, in contrast to the
continual access demanded by the government in *Nollan*, the regulations at issue here do
not authorize anyone to invade the airspace above landowner's property, *ever*. Indeed,

1 **III. The County's Zoning Does Not Effect a Regulatory Taking under *Lucas* or**
2 ***Penn Central*.**

3 The County's zoning is properly analyzed under the cases that govern regulatory
4 takings challenges to restrictions on land use. To date, the landowners have made no
5 effort to contend that the challenged zoning amounts to a regulatory taking. Nor could
6 they reasonably do so.

7 Under *Lucas*, a *per se* regulatory taking may occur where regulation denies a
8 landowner all economically viable use of the claimant's entire parcel. *Lucas*, 505 U.S. at
9 1015-19; *accord*, *Palazzolo*, 121 S. Ct. at 2464-65 (no *per se* taking occurs under *Lucas*
10 unless regulation leaves land valueless or with only nominal value). It is undisputed that
11 the challenged zoning does not interfere with the landowners' ability to continue to pursue
12 their current economically viable uses of the land, or any other use consistent with the
13 county's height restrictions. Amici are informed that the landowners continue to earn
14 substantial revenue from their operation of a trailer park, lounge, and billboard operation.
15 Thus, there is no *per se* taking under *Lucas*.

16 Importantly, the landowners should not be permitted to segment their property into
17 discrete portions in an attempt to show a denial of all use of the airspace over their
18 property. In assessing economic impact, takings jurisprudence requires consideration of
19 not just the affected airspace, but the landowners' entire parcel. *E.g. Fitzgarrald*, 492
20 N.W.2d at 665-66 (no taking where airport zoning ordinance did not deny the landowners
21 economically viable use of the surface of their land despite reduction in market value);

22 there is no evidence that the landowner's airspace in fact will be invaded. Again, there is a
23 qualitative difference between the authorized, continuous access to a popular stretch of
24 California beachfront demanded in *Nollan*, and the mere potential for unauthorized
25 sporadic invasions of airspace. Moreover, *Nollan* cites neither *Causby* nor *Griggs*, and the
26 Court gave absolutely no indication that it was intending to change the long-established
rules laid out in *Causby* and applied by courts throughout the country in addressing
overflight takings claims. It is putting it mildly to say that reading *Nollan* to overrule the
overflight-specific test laid out in *Causby* would be an extravagant and completely
unwarranted leap. More so today than 55 years ago, "common sense revolts" at the
landowners' proposed rule. 328 U.S. at 260.

1 *Cheyenne Airport Bd. v. Rogers*, 707 P.2d 717, 731 (Wyo. 1985) (in assessing the
2 economic impact of airport zoning, the court must look to "the impact of the regulation on
3 the plot as a whole").

4 The U.S. Supreme Court expressly articulated this "parcel-as-a-whole" rule more
5 than twenty years ago in *Penn Central*, where New York City applied historic preservation
6 laws to deny the owners of Grand Central Terminal permission to build an office building
7 atop the Terminal. The Court rejected the owners' argument that takings analysis should
8 focus solely on the air rights above the Terminal, stating:

9 "Taking" jurisprudence does not divide a single parcel into discrete segments
10 and attempt to determine whether rights in a particular segment have been
11 entirely abrogated. In deciding whether a particular governmental action has
12 effected a taking, this Court focuses rather * * * on the nature and extent of
13 the interference with rights in the parcel as a whole -- here, the city tax block
14 designated as the "landmark site."

15 *Penn Central*, 438 U.S. at 130-31. Because the owners could still operate Grand Central
16 Terminal and the surrounding contiguous properties that they owned, the challenged
17 regulation did not deny them all economically viable use of their entire parcel, and the
18 Court rejected the takings claim. *Id.* at 136-38; accord, *Concrete Pipe & Prods. of Cal.,
19 Inc. v. Construction Laborers Pension Trust for S. Cal.*, 508 U.S. 602, 643-44 (1993) ("To
20 the extent that any portion of property is taken, that portion is always taken in its entirety;
21 the relevant question, however, is whether the property taken is all, or only a portion of,
22 the parcel in question.); *Keystone Bituminous Coal Ass'n v. DeBenedictis*, 480 U.S. 470,
23 500 (1987) (*Penn Central* precludes reliance on "legalistic distinctions" to segment
24 property rights in takings cases). Virtually all courts that have addressed the issue have
25 followed *Penn Central*, *Keystone*, and other binding precedent to hold that the relevant
26 parcel for takings analysis consists of the claimant's entire contiguous property, not just
the affected portion.¹¹

¹¹ *E.g., District Intown Props. Ltd. P'ship v. District of Columbia*, 198 F.3d 874, 881 (D.C. Cir. 1999) (relevant parcel includes both the affected and unaffected portions of the

1 Where, as here, height restrictions or other land-use controls do not deny all
2 economically viable use of the claimant's entire parcel, they are analyzed under a multi-
3 factor test set forth in *Penn Central*, which requires courts to examine (1) the economic
4 impact of the regulation; (2) whether it interferes with the landowner's distinct,
5 investment-backed expectations; and (3) the character of the challenged government
6 action. *Penn Central*, 438 U.S. at 124. Again, the landowners have not argued that the
7 challenged zoning amounts to a regulatory taking under *Penn Central*. Nor could they.

8 There is "no serious difference of opinion in respect of the validity of laws and
9 regulations fixing the height of buildings within reasonable limits * * *." *Village of*
10 *Euclid*, 272 U.S. at 388. The authority to restrict the height of buildings is one of the most
11 common powers granted to municipalities. The first section of the Standard State Zoning
12 Enabling Act of 1924 ("SZEА"), which has served as the model for zoning enabling laws
13 in all 50 states, provides: "For the purpose of promoting health, safety, morals, or the
14 general welfare of the community, the legislative body of cities and incorporated villages
15 is hereby empowered to regulate and restrict the height, number of stories, and size of
16 buildings and other structures * * *." SZEА, Sec. 1, *quoted in* J. Juergensmeyer & T.
17 Roberts, LAND USE PLANNING AND CONTROL LAW 46 (1998). It would be ironic indeed if
18 the Takings Clause were read to require compensation for height restrictions imposed to

19 _____
20 owner's parcel); *Tabb Lakes, Ltd. v. United States*, 10 F.3d 796, 802 (Fed. Cir. 1993)
21 ("[T]he quantum of land to be considered is not each *individual* lot containing wetlands or
22 even the combined area of wetlands. If that were true, the Corps' protection of wetlands
23 via a permit system would, *ipso facto*, constitute a taking in every case where it exercises
24 its statutory authority. [*Penn Central*] negates that view * * *."); *City of Annapolis v.*
25 *Waterman*, 745 A.2d 1000, 1022 (Md. 2000) ("[T]he property to be assessed for
26 economically viable use is, as we have said, the entire tract of land."); *K & K Constr., Inc.*
v. Department of Natural Res., 575 N.W.2d 531, 537 (Mich. 1998) ("[C]ontiguity and
common ownership create a common thread tying these three parcels together for the
purpose of the takings analysis"), *cert. denied*, 525 U.S. 819 (1998); *Zealy v. City of*
Waukesha, 548 N.W.2d 528 (Wis. 1996) (relevant parcel included about 8.2 acres zoned
as wetlands and 2.1 acres of contiguous property zoned for residential and commercial
development).

1 enhance air safety, even though identical height restrictions are not compensable takings
2 under longstanding precedent if imposed to enhance aesthetics or preserve historic
3 structures.

4 Moreover, amici are informed that the landowners bought the property after
5 imposition of the challenged zoning, and thus there was no interference with any
6 reasonable, investment-backed expectations. *E.g.*, *Cheyenne Airport Bd.*, 707 P.2d at 732
7 (because the landowners acquired the land after the airport zoning ordinance had been in
8 effect, it is “unlikely that [they] have suffered loss of 'distinct, investment-backed
9 expectations'”) (quoting *Penn Central*); *Fitzgarrald*, 492 N.W.2d at 665 (“Absent some
10 physical invasion, however, a taking does not occur until there has been a substantial
11 interference with investment-backed expectations.”). Although *Palazzolo* holds that post-
12 enactment acquisition of land is not always dispositive in regulatory takings cases (121 S.
13 Ct. at 2462-64), it is clear that post-enactment acquisition remains highly relevant to
14 landowner expectations under *Penn Central*. *See id.* at 2465-67 (O'Connor, J.,
15 concurring); *id.* at 2471 n.6 (Stevens, J., concurring in part and dissenting in part); *id.* at
16 2477 n.3 (Ginsburg, J., joined by Souter & Breyer, JJ., dissenting); *id.* at 2477-78 (Breyer,
17 J., dissenting); *Ruckelshaus v. Monsanto Co.*, 467 U.S. 986, 1006-07 (1984) (lack of
18 interference with expectations defeated a portion of a takings challenge to federal pesticide
19 law).

20 Nor have the landowners shown the kind of severe economic loss sufficient to
21 establish a regulatory taking under *Penn Central*. Because the land at issue retains
22 significant value and may continue to be put to economically viable use, no regulatory
23 taking has occurred. *E.g.* *District Intown Props. Ltd. P'ship v. District of Columbia*, 198
24 F.3d 874, 883 (D.C. Cir. 1999) (A “claimant must put forth striking evidence of economic
25 effects to prevail under the [*Penn Central*] ad hoc inquiry.”); *Animas Valley Sand &*
26 *Gravel v. Board of County Comm'rs*, 38 P.3d 59, 67 (Colo. 2001) (a non-*per se* taking

1 under *Penn Central* occurs only where regulation leaves a landowner with "a value
2 slightly greater than de minimis").

3 Finally, the character of the government action weighs heavily against a finding of
4 a taking. The challenged air safety protections advance "the highest of public interests --
5 the prevention of death and injury." *First English Evangelical Lutheran Church v. County*
6 *of Los Angeles*, 258 Cal. Rptr. 893, 904 (Ct. App. 1989).

7 In short, every factor in the *Penn Central* inquiry weighs against a finding of a
8 taking.

9 **IV. A Ruling for the Landowners Would Have Devastating Consequences for Air
10 Safety and Municipal Budgets Throughout Nevada and Across the Country.**

11 The national implications of this case cannot be emphasized too strongly. In recent
12 decades, air traffic has experienced rapid growth. Airline deregulation in 1978 resulted in
13 a near doubling of traffic at U.S. airports by 1989.¹² Because most major airports were
14 designed decades ago and did not adequately anticipate future growth, they require
15 significant expansion to keep up with increased demands. The consolidation of air traffic
16 into hub airports also necessitates the construction of new runways at many airports.¹³ In
17 the face of these and other pressing problems in the aftermath of September 11, the
18 aviation industry and the general public can ill-afford an unprecedented, wholly unjustified
19 expansion of takings liability as it relates to zoning that implements FAA minimum safety
20 standards.

21 In the wake of the landowners' \$22 million judgment awarded by the district court,
22 numerous other landowners are pursuing similar claims against the County, many seeking
23 compensation in excess of several million dollars. Every landowner whose property is

24 ¹² See Steven H. Magee, *Protecting Land Around Airports: Avoiding Regulatory Takings*
25 *Claims by Comprehensive Planning and Zoning*, 62 J. AIR L. & COM. 243, 243 & n.1
(1996) (citing sources).

26 ¹³ *Id.* at 243-44.

1 transected by a transition zone would have a valid takings claim under the district court's
2 ruling. Any landowner covered by a horizontal or conical zone, which extend for miles
3 beyond airports, could file a claim under the same theory, arguing that because an
4 unplanned deviation might result in the invasion of the airspace above the property,
5 compensation is due. There is little doubt that affirmance of the district court's ruling
6 would wreak havoc on municipal budgets across the state.

7 And make no mistake, the impact of this case extends far beyond the County of
8 Clark and the State of Nevada. The County's zoning is typical of those used at airports
9 across the country. Municipalities and owners of land near airports across the country are
10 watching this case. In view of the enormous stakes involved, amici urge this Court to
11 reject the landowners' radical physical-invasion theory, adhere to *Causby* and progeny, and
12 reverse the ruling below. Public safety, the public fisc, and the sound development of
13 takings jurisprudence hang in the balance.

14 CONCLUSION

15 The judgment below should be vacated and the trial court directed to enter
16 summary judgment for Appellant County of Clark.

CERTIFICATE OF COMPLIANCE

I hereby certify that I have read this appellate brief, and to the best of my knowledge, information, and belief, it is not frivolous or interposed for any improper purpose. I further certify that this brief complies with all applicable Nevada Rules of Appellate Procedure, in particular N.R.A.P. 28(e), which requires every assertion in the brief regarding matters in the record to be supported by a reference to the page of the transcript of appendix where the matter relief on is to be found. I understand that I may be subject to sanctions in the event that the accompanying brief is not in conformity with the requirements of the Nevada Rules of Appellate Procedure.

Dated this 18th day of March, 2002.
